Crestron Certifies New Imerge Touchscreen Control Module

*Latest Imerge software module for Crestron touchscreen controllers
delivers class-leading facilities to installers and end-users*

Cambridge, England -- Imerge, the Cambridge-based pioneer of hard disk home media servers, is delighted to announce that Crestron has officially certified the company's latest software module for Crestron touchscreen control systems.

Developed for Imerge by Row Seven, the coding experts responsible for the recent iPhone control app, the Crestron module has been designed to allow easy integration of Imerge media server components with Crestron control systems. The software delivers a powerful roster of facilities to enable full control of Imerge server components, accessed via an attractive and intuitive user interface, delivering all the flexibility, elegance and simplicity that Imerge users demand.

Whether browsing, searching or creating a playlist, the new module's slick interface makes it a pleasure to interact with your media via Crestron's touchscreen control panels, aided by crisp, clean graphics and super-sharp cover art. What's more, the new module is as beneficial to installers as it is to end-users, scaling from a simple one-room installation to a whole-house scenario with ease, thanks to the module's truly 'modular' architecture.

Crestron is the world's leading manufacturer of advanced automated control systems for residential and commercial use, and the company's official certification of the new module further cements Imerge's position as the number-one brand of high-performance media servers for home installations.

Commenting on the Crestron module, Cameron Wade, CEO of Imerge, said:

"As an integration partner with many control systems, we are delighted that our close relationship with Crestron continues with certification of our latest module."

The new module is available free of charge to certified Imerge dealers and installers via the Imerge website: www.imerge.co.uk

Based in Cambridge, England, Imerge is a global leader in hard disk media server technology. The company was formed in 1997 with the specific intention to revolutionise the way we store and use entertainment media; two years later it launched the first-ever dedicated audio server. The company's current product range includes the world's best-selling music server, the S3000, together with the MediaServer MS1 and XiVASafe ultra-secure storage system – the most advanced management and archiving solution for high-definition music and movies currently available. In addition to its own server range, the company's pioneering development of Internet-enabled media management software under its XiVA brand has cemented its status as the leading supplier of OEM server technology to the custom installation and premium AV industry worldwide. Imerge is part of the Nortek Group of Companies.
